

ME33 Boundary Microphone Boundary Microphone

- Ideal solution for conferences
- Purpose-built for voice captures
- Superior sound quality
- Stereo recording possible

Record from a distance

The ME33 is a powerful, omni-directional microphone that is purpose-built to record voices from a distance - even in the largest conference rooms. Combined with an Olympus professional voice recorder*, it consistently produces audio files in crystal-clear sound quality by automatically cutting extremely high- and low-frequency sounds. It also gives you scalable recording power: By connecting up multiple ME33 microphones** using the bundled connector, it is also possible to produce a stereo sound version (with six units) or a monoaural version (with three units) of whatever you wish to record.

*Olympus Voice Recorder not included.

** Please note: ME33 microphone is sold individually.

Specifications

Characteristics

Directionality	Omni-directional
Impedance	2.2 k Ω

Interfaces Input

Microphone jack	3.5 \varnothing mm / Impedance 2.2 k Ω
Microphone type	Electret condenser microphone
Microphone characteristics	Omni-directional
Microphone sensitivity / gain	- 35dB at 1kHz-

Dimensions

Weight	110g
Dimensions (\varnothing)	120mm \varnothing x 23mm
Cable length	2m

Frequency response

Frequency response	70 - 1000Hz
